

ASD and Applied Behavior Analysis Therapy: Using Positive Reinforcement to Teach & Change Behavior

Positive reinforcement is the hallmark principle of Applied Behavior Analysis (ABA). We use positive reinforcement to teach new skills and increase skills which children are already capable of. Positive reinforcement for good behaviors increases the odds that more good behaviors will happen in the future. This webinar will discuss how to incorporate positive reinforcement into daily routines and discuss some tactics that may be helpful when teaching a new behavior or changing and redirecting a behavior.

**Join us live via Zoom:
Thursday, May 27, 2021
1:00 pm - 3:00 pm**
